

FlexFiltration

A modular system easily configured to each users' requirement for filtration of fine particulate.

Gravity media, bag filters, cyclonic filtration, and more efficiently remove fine chips and sludge to achieve coolant clarity of 10 microns or less.

FlexG Series

FEATURES

- Fabricated with modular filter and tank components to meet your changing filtration requirements
- Positive seal design used to eliminate fines migration
- Gravity media filtration, cyclonic filtration, or bag filters
- Filter Sizes 30 GPM, 60 GPM & 90 GPM
- Standard Tank Sizes* (Clean & Ultra-Clean Version)
 - 30 gpm - 1250L & 1550L
 - 60 gpm - 1675L & 2025L
 - 90 gpm - 2040L & 2415L

*The tank size is based on volume request and amount of components required - other sizes can be designed upon request.

- Modular options for cost effective customization

BENEFITS

- Fine filtration to 10 microns or less
- Modular design for reduced cost
- Can be integrated with existing coolant tanks and systems
- Customizable and adaptable to maximize efficiency
- Coolant recycling to help meet environmental standards
- Decreased time cleaning coolant tanks and machine tool
- Economic cost savings from recycling and reusing coolant

APPLICATIONS

- Coolant Filtration
- Central Systems
- Oil Filtration
- Water Filtration
- Fluid Filtration

FlexB Series

HOW IT WORKS

1. Dirty coolant is either pumped from the machine or gravity flows to the inlet of the primary filter option.
2. Gravity media, bag filters, or cyclonic filtration clean the coolant.
3. If necessary, coolant moves to secondary filtration or high pressure pumps.
4. Additional chillers, oil skimmers, or monitors can be added to the coolant tank.
5. Filtration components can easily be added or changed if the machining operation changes.

FlexC Series

Jorgensen's FlexFiltration ensures a flexible cost-effective solution for challenging filtration applications.

OPTIONS

- Control or interface with pumps and auxiliary equipment
- High pressure coolant system
- Tramp oil skimmers
- Low profile tanks available on all filter sizes for grinding applications
- Coolant chillers/heat exchangers
- Tank autofill plumbing assembly
- Electronic sensors including liquid level monitoring, coolant temperature, etc.
- Full stainless-steel
